Project: Create & Maintain School & Teacher Profile Application

Description: Under this project, Students have to develop a API based app which will allow users to define School & Teacher profiles and allow to maintain. Application should interface with social media to extract basic information i.e. name, email, address if available.
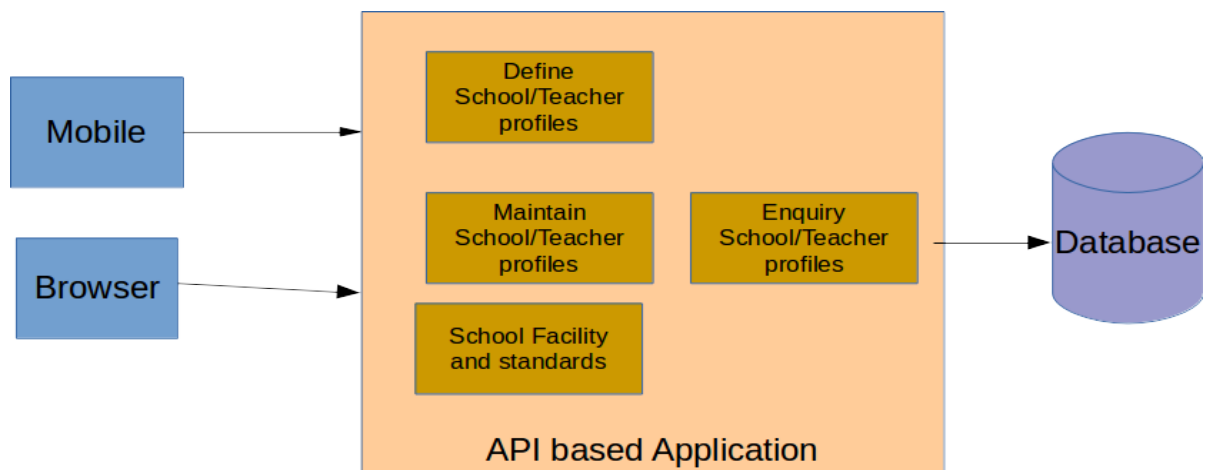

Following features should be implemented:
1. Teacher personal profile i.e. name, DoB, email, address, status, hobbies.
2. Teacher professional profile i.e. company/business, profession, skills, interest
3. Teacher groups i.e. social, professional, closed relationship, distant relationship
4. School profile i.e. name, registration date, standards, facilities, achivement etc

Application should be capable to deliver profile details over:
1. APIs
2. Mobile Application
3. Browser

Note:- overall development should be in Spring boot, hibernate, mysql, android/iphone, angular.js, bootstrap

Deliverables:
List of artifacts that should be produced for this project:
1. Project Report including Sequence Diagrams
2. List all modules of web & mobile application and related functions
3. Source code of web & mobile application
